

ComX chooses Streambuster's flat screen TV with integrated media centre

The Danish development house Streambuster is currently making its mark in the field of integrated flat screens. Streambuster is about to deliver its TV tuner technology and software to the fibernet supplier ComX in the form of an integrated TV. The TV is considered a revolutionary product, as it offers consumers a complete, future-proof media centre solution and renders all loose boxes unnecessary. ComX plans to offer consumers an integrated solution consisting of real HDTV (1080p) and a media centre. CEO John C. Jensen - developer and creator of the technology – explains:

“The fact that one of the most significant Danish suppliers of fibernet can spot the potential in our “all in one” concept – with integrated Streambuster technology and software – clearly proves that the market is hungry for simple, future-proof solutions with a high degree of functionality.”

Plan your TV watching at work

ComX's high-speed fibernet will be able to broadcast an outstanding and unprecedented quality of HDTV. The new integrated TV represents a complete media centre with Streambuster's own TV web portal with an electronic programme guide (EPG) that allows you to sit at the office and plan which programmes to record in the evening – or during the next two weeks. Regardless of your location, you will be able to record as many as six channels at a time and distribute them to different rooms in your home. Online access allows you to see which channel is playing currently, send an SMS to the TV, turn the TV off or change the channel.

Streambuster's TV popular in foreign markets

ComX is planning to offer integrated TV's to its clients over the summer, but not only ComX clients will be able to enjoy the advantages of the technology. John C. Jensen:

“We are currently negotiating with a German business partner in the TV business, and we have initiated similar steps in Thailand. The ComX deal is the first of its kind and thus extremely important, but it is certainly not the last!”

The solution is future-proof in the sense that it allows for the planned replacement of existing analogue standards by digital TV. If you choose to buy the solution, John C. Jensen guarantees that you will not find yourself in the same situation as 300,000 Danes who, in the near future, will be stuck with useless boxes. Consumers who have already invested in an expensive flat screen TV will be able to add the solution as a set-top box.

Online TV

The box or TV has all ports and plugs needed for future TV watching, e.g. DVB-T, DVB-S, DVB-S2, DVB-C and also conventional analogue ports. An IP connection allows you to connect the solution to the internet and receive TV via IP.

See the Streambuster box/TV at the conference in Copenhagen or exhibition in Bangkok

The integrated TV will be presented in Europe at the conference IPTV & WebTV on the 7th of February at 8.30 at Hotel Scandic Copenhagen, Vester Soegade 6, 1601 Copenhagen. Finn Helmer, CEO at ComX and John C. Jensen, CEO at Streambuster will be present. In Asia the solution will be presented on the 7th-10th of February at the Comworld IT exhibition - an exhibition that equals the CES exhibition in Las Vegas.

Streambuster represents the development house of the Frontstairs organisation, which has subsidiaries in Denmark, Thailand and Taiwan. Frontstairs delivers hardware and software to the TV business – both in the BtC market and the BtB market – and also delivers in-store solutions to Acrossmedia.

ComX delivers stable broadband platforms to more than 35,500 homes. ComX delivers high-speed broadband which may be upgraded to 10Gbit/sec. primarily via ComX's own 300 km. fibernet. ComX distributes CANAL+ on IPTV to its many cable clients.

Box/TV advantages:

- Equipped for all existing and future broadcast formats
- You choose when and where to watch TV – record as many as six channels at a time on the harddisk, regardless of your location. The six channels may be distributed to any room in your home and for example allow you to choose one channel in the sitting-room and another channel in the children's room
- Functions as a media centre and ensures maximum freedom and flexibility – search for the series or programmes you prefer and record them automatically
- Allows you to insert a large number of different pay systems and is equipped for iTunes TV, Joost, Metacafe, Youtube, DR Bonanza and other internet based TV services
- Represents a TV application with a future-proof TV tuner that can receive TV from DVB-T, DVB-S, DVB-S2, DVB-C and analogue – equipped for both MPEG2 or MPEG4
- DVD included with both BluRay/HD-DVD options
- High-quality components based on high industry standards ensure a stable solution
